

Project Description

We are looking for an experienced web developer to build a dynamic web application for a company focused on selling various products. The application should include product listing, customer account management, shopping cart, and secure checkout features, along with an intuitive, user-friendly design. It should also support inventory management, order tracking, and integrate with multiple payment gateways. The site should be responsive and SEO-friendly, with an admin dashboard for product, order, and customer management.

Requirements:

- Strong knowledge in front-end (HTML, CSS, JavaScript) and back-end (Node.js, Django, etc.) frameworks
- Experience with database integration (MySQL, MongoDB, etc.)
- Understanding of security best practices and e-commerce functionalities
- Good communication skills and ability to deliver within deadlines

If you have relevant experience and a portfolio showcasing similar projects, we'd love to hear from you!
